### Pump-Action and Magazine-Fed Bullpup Shotgun:

**Dual Capability:** This bullpup shotgun is equipped with both pump-action and magazine-fed systems. This dual capability allows users to quickly adapt to different shooting conditions.

**Compact Design:** The bullpup design presents the shotgun in a shorter profile, providing users with maneuverability and versatility for both hunting and defense purposes.

**Pump-Action Mechanism:** The pump-action feature combines reliability with cost-effectiveness. After each shot, the user operates the pump-action to chamber the next round, offering control and speed.

This shotgun model combines various advantages for both hunting and defense purposes, offering users a versatile firearm experience. The dual capabilities of pump-action and magazine-fed features provide flexibility to adapt to diverse shooting conditions.

# MAGAZINE FED

The vertical magazine shotgun is a type of firearm that offers a unique approach by integrating its magazine vertically, distinguishing it from traditional shotgun designs. This distinctive design allows the cartridges to be positioned vertically within the magazine. The vertical magazine provides the user with the ability to quickly and easily change cartridges, enhancing the overall balance and ergonomics of the shotgun. These shotguns typically stand out for their shorter and more compact structure, providing users with increased maneuverability and ease of carry. Manufactured to meet the modern needs of hunting and shooting, vertical magazine shotguns offer users an innovative firearms experience.

# PUMP ACTION

Pump-action shotguns are generally preferred by hunters, sport shooters, and for home defense due to their durability and ease of use. These types of shotguns are available in various models designed for use in hunting fields and shooting ranges.

**ARN-55**

# ARN-55

## PUMP ACTION

The pump-action shotgun is an effective type of firearm widely used for hunting and defense purposes. It first emerged towards the end of the 19th century and gained attention for its innovative features.

The first example of such shotguns was developed by American firearm designer Christopher Spencer in 1882. Spencer designed a shotgun that utilized a pump mechanism to automatically chamber a new round and cock the gun after each shot. This mechanism allowed for rapid and continuous firing, making the shotgun popular.

The pump-action shotgun has found preference in various fields, including hunting, security, and law enforcement. Fast firing and reliability are just a few features that have contributed to the popularity of this type of shotgun. Over time, pump-action shotguns have been produced in various models and designs, catering to a diverse user base. Today, modern pump-action shotguns continue to hold a significant place in hunting and security.

# SEMI AUTOMATIC

A semi-automatic shotgun is a type of shotgun that has a mechanism allowing the automatic ejection of the spent cartridge and the insertion of a new round after firing. These shotguns provide hunters with the capability for quicker shots, but unlike fully automatic rifles, they do not fire consecutively with each trigger pull. Semi-automatic shotguns are commonly used for hunting and recreational purposes. When using these shotguns, hunters should adhere to safety regulations and comply with local legal regulations.

## SEMI AUTOMATIC

A semi-automatic shotgun is a firearm equipped with a mechanism that automatically prepares the next cartridge when fired. This feature allows the user to achieve faster and more rapid shots by eliminating the need to manually charge after each shot. Semi-automatic shotguns are known for their ease of use, reliability, and the advantages in shot speed. Preferred by a wide range of users, these shotguns are designed to meet various needs in hunting fields and shooting ranges

# SIDE BY SIDE

It is difficult to pinpoint an exact date and inventor for the creation of single-barrel shotguns. However, the evolution of firearms technology has been ongoing throughout history. Shotguns, especially, diversified and improved with the development of firearms.

For instance, various firearms emerged around the mid-16th century. During this period, shotguns were often single-barreled and relatively primitive, with ignition mechanisms evolving over time. However, the widespread use and standardization of single-barrel shotguns might have taken several centuries.

Although the historical origins of single-barrel shotguns do not point to a specific moment, the evolution of these shotguns paralleled the general development of firearms. Advancing technology and design allowed for the emergence of more effective and customizable shotguns for hunting and shooting activities.
